

DVB-T2(T) outdoor antenna (passive)

The SCHWAIGER® DVB-T2(T) outdoor antenna is suitable for terrestrial reception of digital television programmes. The introduction of LTE as standard for mobile Internet leads to problems with the reception of digital terrestrial television in some places. The antenna

therefore has an LTE blocking filter that filters out the LTE mobile radio frequency above 790 MHz. DVB-T2(T) can therefore be received without restriction.
