

POWERLINE Network Single Adapter

The network single adapter can be used in addition to an adapter set which is used to establish a network through the power line. Real Plug&Play occurs because the encryption button allows for easy and secure start up without a computer and for a secure 128 Bit

AES encryption of the signal. In addition, a special network filter ensures best possible transfer over a line length of 300 m. The adapter set allows for multi HD/3D streaming.
