Dual Unit Amplifier (2x 18 dB)

This SCHWAIGER® dual unit amplifier is suitable for connecting two TVs or radios to one antenna socket. It balances any signal loss or power loss occurring during distribution.

The amplifier balances the attenuation of long cables of up to 20 m.

FEATURES (BN8699 531)

- for distributing one cable connection to two terminal devices (e.g. TV/receiver)
- balancing of signal loss upon simultaneous operation of 2 TV or radio devices via one antenna socket
- attenuation equalisation for long connection cables (up to 20 m)

TECHNICAL DATA

Quality	PROFESSIONAL
Connections (input)	1x IEC jack
Connections (output)	2x IEC connector
Output level (max.)	100 dbµV (IM 3 DIN 45004 B, 60dB)
Frequency range	47 - 862 MHz
Amplification (typical)	2x 18 dB
Noise figure (typical)	4 dB
Power supply	230 V , 50/60 Hz
Power consumption	1,9 W
Colour	black
Weight	314 g
Dimensions (width)	127 mm
Dimensions (height)	37 mm
Dimensions (depth)	78 mm
Packaging	sealed blister SBL04
