

WiFi Loudspeaker (8 W)

for integration into the Home Automation network

This SCHWAIGER® active loudspeaker can communicate with the HOME4YOU Gateway via the home network. As soon as it is connected to the home automation network, it functions as an Internet radio as well as an alarm signal. Once the device is integrated

into the home automation network, it can also be used to create scenes with other HOME4YOU series components. Using the Voco HD App, the speaker can also be used without a gateway to play audio streams.
