

## HOME4YOU® Starter Set "Thermostats"

with a coupon for the initial installation

The HOME4YOU® starter set "Thermostats" is a bundle for monitoring and controlling room temperature within the home. The SCHWAIGER® Gateway allows for accessing and controlling the temperature sensors and radiator thermostats from within the home network or from outside of the home via the

SCHWAIGER App (cloud service). The radiator valve regulates the pre-set temperature and is suitable for installation on wall heaters. The regulated temperature is displayed on the device by means of a LCD display. Additional HOME4YOU® components can be incorporated via the Gateway.
