HDMI™ Changeover Switch

with IR receiver, 3 IN > 1 OUT, automatic

This SCHWAIGER® HDMI™ changeover switch can switch between three playback devices. This allows for parallel use of devices such as a satellite receiver and a DVD player or a games console. Transmission is made in high definition quality to devices such as TVs.

The changeover switch operates automatically and the selected channels are displayed on the switch by LEDs. Thanks to the IR receiver and the corresponding remote control, the changeover switch can be operated manually as well.
