

Cable conduit

made of neoprene, with velcro fastener

The water-repellent cable conduit from SCHWAIGER® simply and practically eliminates any cable chaos in the home. It offers enough space for several cables at once, can be individually shortened and is reusable thanks to the useful Velcro fastener. Once laid, the cable tube thus ensures lasting organi-

sation at the desk, in the living room or almost any other room in the house. Thanks to the neoprene finish, it also protects the cables from water and moisture. On top of that, the flexible cable conduit prevents cable bites and thus protects your cables and your pet.
