Network cable tester

Detect faulty RJ45 and RJ11 cables quickly and reliably!

With this SCHWAIGER® network cable tester it is possible to check the functionality of a network or ISDN cable. The tester consists of a master and a remote unit with one RJ45 and one RJ11 jack both. The device can quickly and reliably test both cables and already laid

cable sections. The network tester thus gives you the opportunity to test the PIN assignment of an RJ45 or RJ11 cable in a simple way.
