Wireless Electricity Usage Monitor

Identify devices causing high electricity expenses!

This SCHWAIGER® electricity usage monitor enables you to calculate electricity consumption and expenses. It is simply plugged between a power outlet and an electrical appliance and then the information is shown on a separate wireless LCD display.

IF the electricity rate is given, the monitor calculates the costs in euro for a certain period of time. There are two different electricity rates to choose from.

Last updated: 28.03.2016

FEATURES (PMFEM 032)

- calculates electricity expenses
- measures electricity usage
- various electricity rates can be chosen
- helps to save energy
- easy usage
- saves energy consumption data
- complies with extremely high requirements
- Tested Safety (TÜV and GS)
- batteries not included

TECHNICAL DATA

Connections 1x Schuko socket
1x Schuko plug

Display LCD display

Capacity (max.) 16 A, 3600 W

Measurement range 200 - 250 V AC

Measurement accuracy +/- 1 % or 0.2 W

Energy consumption < 5 W

Radio frequency 433.92 MHz

Operating temperature -10 bis 40 °C

Operation voltage 230 V AC

Childlock yes

Battery type AAA (Micro)

Colour white

packaging sealed blister SF
